

AutoFlush® Sidemount

A Component of the Touch-Free Washroom

technical concepts
Innovative Hygiene Solutions

Toilet Model Shown

AutoFlush® Sidemount easily automates a variety of different flushometer valves (Sloan, Zurn, Coyne & Delaney, Teck*, Crane*, Tempus*) by simply removing the flush handle and attaching this unit in its place (no water shut-off required). This system promotes hygiene by eliminating potential points of cross-contamination, while ensuring fixtures are flushed and presentable. The AutoFlush® Sidemount incorporates dry cam-gear technology, which eliminates outdated solenoids that lead to costly repairs. The angle lens reduces unwanted flushes by redirecting the sensing zone. Models are available for either toilets (with courtesy flush button) or urinals (without courtesy flush button).
