

# AutoFlush® Clamp

A Component of the Touch-Free Washroom

technical concepts  
Innovative Hygiene Solutions

Toilet Model Shown

**AutoFlush® Clamp** automates a variety of different flushometer valves (Sloan, Zurn, Coyne & Delaney, Toto\*, Teck\*, Crane\*, Tempus\*) by sliding the unit over the flush handle and tightening two screws (no water shut-off required). This system promotes hygiene by eliminating potential points of cross-contamination, while ensuring fixtures are flushed and presentable. The AutoFlush® Clamp incorporates dry cam-gear technology, which eliminates outdated solenoids that lead to costly repairs. The angle lens reduces unwanted flushes by redirecting the sensing zone. Models are available for either toilets (with courtesy flush button) or urinals (without courtesy flush button).
